SAMPLE BRIEF · ILLUSTRATIVE DATA

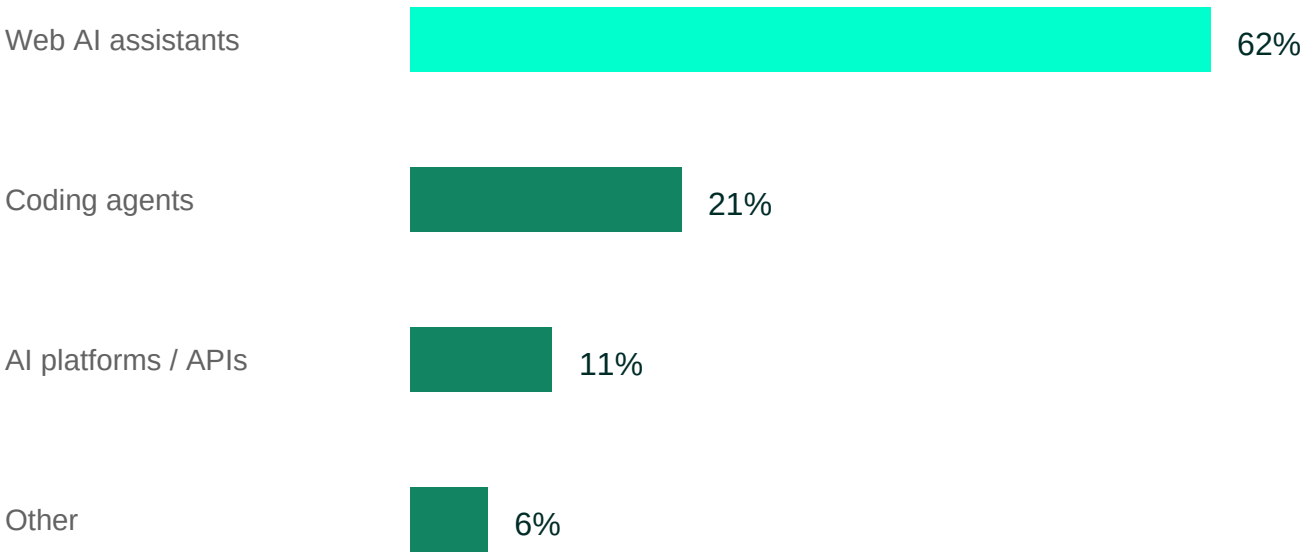
AI adoption is outpacing the controls around it

What a typical enterprise network shows in 30 days of AI traffic.

Key findings

In this illustrative sample, 71% of employees used at least one AI tool that IT had not approved. The network recorded 77 distinct AI applications in 30 days, and policy acted on 30,254 AI interactions. Most of the traffic went to web AI assistants, while coding agents were the fastest-growing category.

Share of AI traffic by category



What to do next

- See every AI app and agent on the network.
- Decide which ones the business approves.
- Enforce one policy everywhere, in real time.

"Visibility came first. Once we could see the AI traffic, the policy conversation took a day, not a quarter." - Sample CISO, illustrative quote
